PROFESSIONAL SUMMARY

Full-Stack Developer with **7+ years** building production web applications across fintech, Web3, and SaaS. For the past 5 years, core engineer — working directly with the CEO — on a **white-label STO investment and crypto-payment platform** powering multiple live, regulated products that have raised real capital from investors. Deep hands-on experience with **KYC/AML integrations** (Sumsb, Shufti Pro, Muinmos), **Keycloak** SSO, multi-currency **crypto payment gateways** (BTC/ETH/USDT), and complex, compliance-driven business logic. **Certified Vue.js Developer** specializing in **Vue 3, Nuxt, Laravel, and TypeScript**.

PROFESSIONAL EXPERIENCE

CPI Technologies GmbH

Full-Stack Developer · Remote (Germany) · Apr 2021 – Present

European software company building white-label fintech, STO, and crypto-payment platforms for international clients. Core engineer working directly with the CEO on the flagship product and its client deployments, allocated across multiple projects concurrently under an agency model.

Micca — White-Label STO Investment & Crypto Payment Platform (Flagship) · 2022 – Present

- Primary engineer, alongside the CEO, on CPI's flagship white-label platform (frontend, backend, DevOps) — now powering **4 live STO products** and **2 merchant-gateway deployments**.
- Designed and built a **crypto merchant payment gateway from scratch** — hosted checkout accepting **BTC, ETH, and USDT**, per-merchant API keys, signed **webhooks**, and auto-generated API docs for merchant developers.
- Implemented a full **transaction ledger** (custodial wallet, merchant balances, withdrawals, automated fee booking); integrated an in-house crypto-gateway library and the **NowNodes** blockchain API for on-chain processing.

Intokia — MFSA-Regulated STO Platform (built on Micca) · 2022 – Present

- **Sole developer** delivering the full architecture — frontend, backend, and deployment — of a live **Security Token Offering platform regulated by the Malta Financial Services Authority (MFSA)**; has raised **hundreds of thousands of euros** from real investors.
- Built a **drag-and-drop asset/project page builder** letting issuers customize offering pages from a library of sections and branding options, persisted as structured JSON.
- Integrated three KYC/AML providers (**Sumsb, Shufti Pro, Muinmos**), **Keycloak** SSO, and **HubSpot** CRM; implemented a configurable investment flow with complex, client-specified financial formulas under regulatory compliance.
- Stack: **Laravel, Nuxt 3, Tailwind CSS, Keycloak**.

Green X-chain — STO Platform (Frontend) · 2022

- Sole frontend developer; delivered **pixel-perfect, mobile-friendly landing pages** from Figma on an early (Nuxt 2) version of the Micca platform, customized to the client's brand; integrated HubSpot. Platform attracted investors across multiple live projects.

StrikeX — Crypto Token Exchange (Frontend) · 2023

- Frontend developer on a live **crypto token exchange** (Next.js); shipped features from design to production and fixed Web3 integration bugs. Built a **Swap & Buy exchange widget** with live calculation of receive amounts and gas fees.
- Re-engineered the crypto market table for performance — eliminated unnecessary re-renders, added lazy loading, and embedded per-row price charts — turning a very slow page into a responsive one.

Bitalo — KYC / Verification Platform (Backend) · 2024 – 2025

- Backend developer; built a large share of the **Laravel** API controllers and endpoints powering the platform's **KYC verification** workflows, integrated the core third-party KYC provider, built an operator admin dashboard, and wrote unit tests for critical verification scenarios.

Sellerpoint (formerly Volv) — E-commerce Seller Platform (Full-Stack) · 2021 – 2023

- Full-stack contributor on a cross-functional team; major contributor to the migration from **Nuxt 2 to Nuxt 3** and built CRUD modules for products and fulfillments.
- Built the **multi-step product-creation flow**, reverse-engineering Shopify's variant auto-generation to replicate attribute-based product-variant creation.
- Integrated **Shopify, Amazon, eBay, PayPal, and Stripe**; platform serves **250+ brands**.

Internal Composer Packages (nice-*)

- Contributed to CPI's reusable in-house **Laravel/Composer packages** (e.g. *nice-auth*, *nice-blog*) used across the company's API products (Micca, Sellerpoint) — extended their models, business logic, and features so new projects ship auth, blogging, and other modules on install.

LemonSwan GmbH

Full-Stack Developer (Contract) · Remote · Jul 2021 – Oct 2021

- Built the frontend of V2 of a German dating platform from scratch using **Vue 3, Laravel/Inertia**, and Tailwind CSS.
- Created the reusable **base component library** (buttons, form inputs, and more) used across every page, and translated Figma designs into pixel-perfect, responsive UI.
- Delivered most application pages (including the pricing page) by contract end; work was handed off for launch.

Simply Be Found

Full-Stack Developer (Freelance) · Remote · Jan 2021 – Apr 2021

- Built a **business-presence management dashboard** integrating the **Google Business Profile API** — letting users manage reviews, ratings, and business profiles in one place — using **Laravel** and **Vue.js**.
- Implemented new features and fixed bugs across the app; also handled WordPress tasks.

Experience Digital

Software Engineer · Remote · Jun 2020 – Dec 2020

- Shipped full-stack features across multiple client products at an Australian software agency (Laravel + Nuxt):
- **Udokn** — martial arts social media platform; **Worknice** — HR SaaS with **Xero accounting integration**; **Upcover** — insurance platform (Laravel backend).

Ocom Software

Software Engineer (Contract) · Remote · May 2020 – Sep 2020

- Built business web applications using **Django (Python)** and **Vue.js** for an Australian client, using a proprietary low-code boilerplate to scaffold models, relationships, and forms across multiple small-business projects.

3E Boosting

Full-Stack Developer (Freelance) · Remote · Mar 2019 – Dec 2019

- Solo-built and launched a full-stack e-commerce site for a German client using **Vue.js**, **PHP**, and pure CSS; integrated the **PayPal API** for card and PayPal-account checkout.

SKILLS

Languages: JavaScript, TypeScript, PHP, Python, SQL, HTML5, CSS3

Frontend: Vue 3, Nuxt 3, React, Next.js, Tailwind CSS, Storybook, Responsive UI, Figma-to-Code

Backend: Laravel, Filament, Inertia.js, Node.js, Django, REST API Design, GraphQL, MVC Architecture, Composer package development, Authentication & Authorization

Databases: MySQL, PostgreSQL, Redis, Database Schema Design

Fintech & Web3: STO / tokenized-asset platforms, crypto merchant payment gateways (BTC/ETH/USDT), custodial wallets & ledgers, NowNodes, Web3 wallet connectivity, blockchain integration

Identity & Integrations: Keycloak (SSO), KYC/AML (Sumsb, Shufti Pro, Muinmos), Stripe, PayPal, HubSpot, Shopify, Amazon & eBay, Google Business Profile API, WebSockets, webhooks

Infrastructure & Tooling: Docker, AWS (S3), GitHub Actions, SemaphoreCI, Git, Linux, AI-assisted development

EDUCATION & CERTIFICATIONS

Bachelor's Degree, Computer Engineering — Western Leyte College of Ormoc City · 2020

Vue.js Certified Developer (Mid-Level) · certificates.dev · Sep 2023 · [verify](#)
